Research Note / Preliminary Theoretical Framework

On the Emergence of Stochasticity from Determinism

A Translation of the Non-Play-Dice Paradigm

Sherif Rashwan

Concept Intent

This research note serves as an initial conceptual blueprint to rigorously bridge deterministic micro-dynamics with apparent macroscopic stochasticity. The objective is to establish a mathematically valid foundation for the proposition that localized randomness is an epistemic consequence of system state projection, rather than an intrinsic law. This framework is formulated for subsequent expansion and comprehensive structural analysis.

The Unified Morphism

To reconcile the absolute determinism of a closed physical system with the emergence of apparent random chance, we project the high-dimensional, exact Liouvillian evolution of the global phase space onto a lower-dimensional manifold of macro-observables via the **Mori-Zwanzig projection operator formalism**.

The philosophical premise is encapsulated in a single, self-contained master equation mapping the structural transformation of a dynamical variable $A(t)$:

$$\underbrace{\left(\frac{\partial}{\partial t} - i\mathcal{L}\right)\mathbf{\Gamma}(t) = 0}_{\text{“God doesn't play dice”}} \quad \xrightarrow{\mathcal{P}} \quad \underbrace{\frac{d}{dt}A(t) = i\Omega A(t) - \int_0^t K(\tau)A(t-\tau)d\tau + \mathcal{F}(t)}_{\text{“What appears as chance is the manifestation of probabilistic stochasticity”}}$$

Taxonomy of the Operators

Every mathematical object within this unified equation represents a precise physical and informational construct, ensuring absolute scientific validity away from metaphorical pseudo-science:

1. The Deterministic Micro-Manifold (Left-Hand Side)

- $\mathbf{\Gamma}(t)$: The exact, microscopic state vector trajectory within the full unconstrained phase space, evolving with zero probabilistic uncertainty.
- $i\mathcal{L}$: The **Liouville operator**, defined via the Poisson bracket (or commutator in quantum regimes) with the system Hamiltonian H:

$$i\mathcal{L} = \{\cdot, H\} = \sum_j \left(\frac{\partial H}{\partial q_j}\frac{\partial}{\partial p_j} - \frac{\partial H}{\partial p_j}\frac{\partial}{\partial q_j}\right)$$

This operator governs the complete, unyielding determinism of the universe; it dictates that the future is uniquely and perfectly encoded in the present state.

2. The Epistemic Filter ($\mathcal{P}$)

- $\mathcal{P}$: The **Projection Operator**. It acts as an informational filter, mapping the unobservable microstates onto a closed set of macroscopic variables accessible to an observer.
- $\mathcal{Q} = \mathcal{I} - \mathcal{P}$: The orthogonal complement operator, which isolates all hidden, unmeasured degrees of freedom (the unobserved environment).

3. The Emergent Stochastic Dynamics (Right-Hand Side)

Splitting the full deterministic trajectory across the orthogonal boundaries of $\mathcal{P}$ and $\mathcal{Q}$ transforms the system into the **Generalized Langevin Equation** (GLE):

- $i\Omega A(t)$: The **Systematic Coherence Vector**, describing the instantaneous, organized propagation of the state within our observable subspace.
- $\int_0^t K(\tau)A(t-\tau)d\tau$: The **Memory Kernel**, representing the historical back-reaction and structural drag exerted on the observable by the hidden orthogonal states.
- $\mathcal{F}(t) = e^{i\mathcal{QL}t} i\mathcal{QL}A(0)$: The **Orthogonal Noise Force**. Because $\mathcal{F}(t)$ contains the exact propagator $e^{i\mathcal{QL}t}$, it remains completely deterministic from a global standpoint. However, because it projects entirely into the hidden subspace ($\mathcal{P}\mathcal{F}(t) = 0$), it satisfies all mathematical axioms of a probabilistic, stochastic process to an observer bounded by $\mathcal{P}$.

The Fluctuation-Dissipation Lock

The apparent randomness $\mathcal{F}(t)$ is strictly bound to the underlying structural systemic drag $K(\tau)$ via the Fluctuation-Dissipation Theorem:

$$K(\tau) = \frac{\langle \mathcal{F}(\tau), \mathcal{F}(0) \rangle}{\langle A, A \rangle}$$

This mathematical balance guarantees that what manifests as chance is a direct, lawful reflection of the hidden underlying structural order.
